About the project

Overview of the project

Technology is a valuable tool for improving the teaching process at school because creates a new learning environment, more attractive and enjoyable for schoolchildren.

Aims

What we want to achieve

- Integrate of technology and smart devices to everyday learning process that let children to learn through playing, using more attractive activities,
- Develop children's critical thinking, learning and social skills,
- Improve of children's abilities and skills related to observation, exploration with teaching methods that promote the autonomous learning,
- Develop cooperation and responsibility, through games with other children,
- Children will come in contact with culture of other countries,
- Children and teachers will gain knowledge about using technology and will improve their learning, technical and digital skills.

In terms of results

develop students' digital knowledge

develop cooperation and responsibility through games with other children and they will be exercised with the use of new technology

improve their speaking, writing and listening competences
